The listing of claims will replace all prior versions, and listings, of claims

in the application:

**Listing of Claims**:

1. (Currently Amended) A navigation apparatus, comprising:

a storage device in which first data and second data that are a

different type of data from the first data are stored; and

a control device that controls road guidance including map display

by using the first data and the second data, wherein:

the control device updates the first data in a first update unit and

updates the second data in a second update unit different from the first update

unit; and

the first update unit represents a predetermined map range and the

second update unit represents a range greater than the predetermined map

range.

2. (Currently Amended) A navigation apparatus according to claim 1,

wherein:

Page 2 of 16

Amendment Dated: March 10, 2009

Reply to Office Action Mailed: October 10, 2008

Attorney Docket No. 029267.57737US

the fir	st data are relat	ed to map displ	lay; <u>and</u>	
the se	cond data are rel	lated to road co	nnections <del>; ar</del>	<del>rd</del>
——the fir	st update unit re	e <del>presents a pre</del>	<del>determined r</del>	nap range and the
second update unit represents a range greater than the predetermined map				
range.				
3. (Curre	ently Amended)	A navigation a	apparatus acc	cording to claim 1,
wherein:				
the fir	st data are back	ground data us	ed for map di	isplay; <u>and</u>
the se	cond data are at	least one type	of data amo	ng road data used
to locate a position on a road, route search data used in route search and route				
guidance data used for route guidance;				
the fir	st update unit re	<del>epresents a pre</del>	<del>determined n</del>	nap-range; and
——the-s	econd update 1	ınit represent	s a range	greater than the

predetermined map range.

Amendment Dated: March 10, 2009

Attorney Docket No. 029267.57737US

4. (Currently Amended) A navigation apparatus according to claim 1,

wherein comprising:

a storage device in which first data and second data that are a

different type of data from the first data are stored; and

a control device that controls road guidance including map display

by using the first data and the second data, wherein:

the control device updates the first data in a first update unit and

updates the second data in a second update unit different from the first update

<u>unit;</u>

the first data are at least one type of search data among name

search data, telephone number search data and street address search data used

to locate a position on a map;

the second data are at least one type of data among road data used

to locate a position on a road, route search data used in route search and route

guidance data used for route guidance;

the first update unit is set so as to update part of the first data

stored in the storage device; and

the second update unit corresponds to the entire second data stored

in the storage device.

Amendment Dated: March 10, 2009

Reply to Office Action Mailed: October 10, 2008

Attorney Docket No. 029267.57737US

5. (Currently Amended) A navigation apparatus according to claim 1,

wherein:

the second update unit corresponds to the entire first second data

stored in the storage device.

6. (Currently Amended) A navigation apparatus according to claim

[[4]] <u>5</u>, wherein:

when new data are to be added to the first data, the control device

adds the new data to the first data in the first update unit; and

when new data are to be added to the second data, the control

device updates the entire second data stored in the storage device and adds the

new data to the second data.

7. (Previously Amended) A navigation apparatus according to claim 1,

further comprising:

an input device to which update data to be used to update the first

data, output from an update data providing apparatus in the first update unit,

Page 5 of 16

Amendment Dated: March 10, 2009

Reply to Office Action Mailed: October 10, 2008

Attorney Docket No. 029267.57737US

and update data to be used to update the second data, output from the update

data providing apparatus in the second update unit, are input.

8. (Previously Amended) A navigation apparatus according to claim 1,

further comprising:

a navigation-side update specifying device that specifies at least

either the first data or the second data as a type of data to be updated and an

update range; and

an output device that outputs to an update data providing

apparatus information indicating the specified type of data to be updated and the

update range.

9. (Currently Amended) An update data providing apparatus that

provides update data to be used to update first data and update data to be used

to update second data of a data type different from the first data to a navigation

apparatus which controls road guidance including map display by using the first

data and the second data, comprising:

Page 6 of 16

Amendment Dated: March 10, 2009

Reply to Office Action Mailed: October 10, 2008

Attorney Docket No. 029267.57737US

an update data storage device in which the update data to be used

to update the first data and the update data to be used to update the second data

are stored; and

an update data output device that outputs to the navigation

apparatus the update data for the first data in a first update unit and outputs to

the navigation apparatus the update data for the second data in a second update

unit different from the first update unit; and

an output specifying device that specifies either the first data or the

second data as a type of update data to be output to the navigation apparatus

and an update range, wherein:

the update data output device outputs to the navigation apparatus

update data of the specified data type over the specified update range.

10. (Original) An update data providing apparatus according to claim

9, wherein:

the first data are related to map display;

the second data are related to road connections; and

Page 7 of 16

the first update unit represents a predetermined map range and the

second update unit represents a range greater than the predetermined map

range.

11. (Original) An update data providing apparatus according to claim

9, wherein:

the first data are background data used for map display;

the second data are at least one type of data among road data used

to locate a position on a road, route search data used in route search and route

guidance data used for route guidance;

the first update unit represents a predetermined map range; and

the second update unit represents a range greater than the

predetermined map range.

12. (Previously Amended) An update data providing apparatus

according to claim 9, wherein:

Amendment Dated: March 10, 2009

Reply to Office Action Mailed: October 10, 2008

tepty to Office Action Maneu. October 10, 20

Attorney Docket No. 029267.57737US

the first data are at least one type of search data among name search data, telephone number search data and street address search data used to locate a position on a map;

the second data are at least one type of data among road data used to locate a position on a road, route search data used in route search and route guidance data used for route guidance;

the first update unit is set so as to update part of the first data stored in the storage device; and

the second update unit corresponds to the entire second data stored in the storage device.

13. (Previously Amended) An update data providing apparatus according to claim 9, wherein:

the second update unit corresponds to the entire second data stored in the navigation apparatus.

14. (Currently Amended) An update data providing apparatus according to claim 12 13, wherein:

when new data are to be added to the first data at the navigation apparatus, the update data output device outputs the new data to be added to the first data in the first update unit; and

when new data are to be added to the second data at the navigation apparatus, the update data output device outputs update data for the entire second data stored in the navigation apparatus and the new data to be added to the second data.

## Claim 15. (Canceled)

(Currently Amended) A data update system for a navigation 16. apparatus comprising:

a navigation apparatus comprising:

a storage device in which first data and second data that are a different type of data from the first data are stored;

a control device that controls road guidance including map display by using the first data and the second data, wherein the control device updates the first data in a first update unit and updates the second data in a second update unit different from the first update unit, the first update unit

Attorney Docket No. 029267.57737US

representing a predetermined map range and the second update unit representing a range greater than the predetermined map range; and

an update data providing apparatus that provides update data to be used to update first data and update data to be used to update second data of a data type different from the first data to the navigation apparatus which controls road guidance including map display by using the first data and the second data, comprising:

an update data storage device in which the update data to be used to update the first data and the update data to be used to update the second data are stored; and

an update data output device that outputs to the navigation apparatus the update data for the first data in a first update unit and outputs to the navigation apparatus the update data for the second data in a second update unit different from the first update unit,

an output specifying device that specifies either the first data or the second data as a type of update data to be output to the navigation apparatus and an update range, wherein:

the update data output device outputs to the navigation apparatus update data of the specified data type over the specified update range.

Amendment Dated: March 10, 2009

Reply to Office Action Mailed: October 10, 2008

Attorney Docket No. 029267.57737US

17. (Original) An update data providing method for providing update

data to be used to update first data and update data to be used to update second

data of a data type different from the first data to a navigation apparatus that

controls road guidance including map display by using the first data and the

second data, comprising:

specifying at least either the first data or the second data as a type

of data to be updated and specifying an update range;

outputting update data for the first data over the specified update

range in a first update unit to the navigation apparatus if the first data are

specified; and

outputting to the navigation apparatus the update data for the

second data over a range containing the specified update range in a second

update unit different from the first update unit if the second data are specified.

18. (Original) An update data providing method for providing

update data to be used to update first data and update data to be used to update

second data of a data type different from the first data to a navigation apparatus

that controls road guidance including map display by using the first data and the

second data, comprising:

Page 12 of 16

Amendment Dated: March 10, 2009

Reply to Office Action Mailed: October 10, 2008

Attorney Docket No. 029267.57737US

displaying a selection screen in which at least either the first data

or the second data is selected as a type of data for data update;

displaying information indicating a storage state of at least either

the first data or the second data at the navigation apparatus;

displaying an update range specification screen in which an update

range over which at least either the first data or the second data are to be

updated is specified;

outputting the update data for the first data over the update range

having been specified in the update range specification screen to the navigation

apparatus in a first update unit if the first data are selected; and

outputting the update data for the second data over a range containing the

update range having been specified in the update range specification screen to

the navigation apparatus in a second update unit different from the first update

unit if the second data are selected.
